

the 25 hp pump station

The 25 HP pump station produces the high impact water supply used by either the Accutrac® Robot or the Wash Oscillators. It is equipped with a unique flow controlled water fill valve that prevents water pressure drops to other wash equipment. It also has an extended life belt system that provides years of service without any adjustments. The 25 HP Pump Station is built from the very best materials and components to deliver a long life with virtually zero maintenance.

benefits:

- Proven dependable Cat pump
- Fits in small equipment rooms
- Low maintenance
- Open design for easy access
- Flow controlled fill valve prevents pressure drops, which rob water from other equipment
- Pulsation dampening lengthens the life of the pump and plumbing components.

features:

- Industry leading Cat 3535 pump
- 25Hp TEFC (Totally enclosed fan cooled) motor
- Aluminum frame construction
- Extended life belt drive with easy adjust feature.
- Hi-density polyethylene tank w/ lid
- Pulsation damper for vibration free flow
- 36 gpm @ 1150 psi
- Vibration dampening leveling feet
- Automatic oilers
- Includes flow controlled water fill valve
- Space saving design
- Lexan see-through belt guard

technical data:

- motor: 25-Hp, 208/240/460 Volt, 3-phase, 65.1/59.8/29.9 Amp
- water supply required: 40 gpm @ 40psi min.
- Dimensions: 77" high, 30" wide, 39.5" deep

options:

- Low water cutoff switch
 - Motor Starter
-
